Filler Panel with Louvers

Arched Unit panel with Louvers, Keystone and Filler Panel
(This combination also available on the Focus)

Cottage Face with Optional Pewter Trim and Arched Panel

Cape Cod Face with Opening Doors and Arched Panel with Keystone

Performance

At 41,000 BTU's, the Sienna is a powerful and efficient heater. It has the best heat exchanger available on any insert to take advantage of all this energy. The 130 cfm convection fan helps to move the heat further into your home. We have given the Sienna a 50% turn-down ability to control the heat.

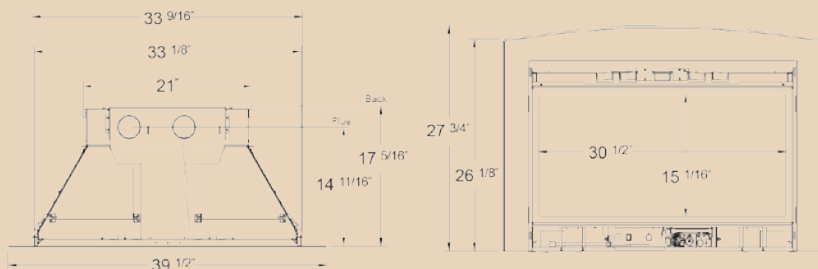

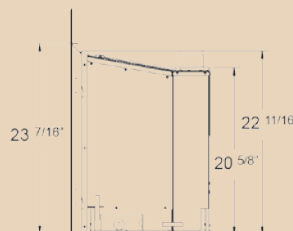

Design

The 5-piece log set and 4-piece "Banker's Brown" brick liner help to frame this beautiful fire. We added a cast iron fire grate to complete the picture. This insert is direct vent but can be converted to a B vent which allows it to fit into a wider variety of install situations.

Installation into a Small Wood Burning Zero Clearance Fireplace.

Even though the Sienna is a large insert, it can be installed into smaller wood-burning zero clearance fireplaces by removing the base of the wood fireplace prior to installation. This modification gives more available height for the install.

Please consult the owner's manual for specific details and restrictions.
