Maximum Comfort. Maximum Efficiency.

An Unbeatable Combination!

Here's how our two stage furnace gives you maximum comfort and maximum efficiency

A conventional single stage furnace operates at high heat until the thermostat is satisfied, then shuts off until there's a demand for heat again. As a result the house is constantly warming up and cooling off. But with a two stage furnace, these temperature swings are virtually eliminated and your home stays at the comfort level you select.

Most of the time, a two stage furnace operates in the low stage, delivering a gentle yet steady flow of heated air. When the weather turns really cold, the furnace automatically shifts into the high stage, providing the extra heat needed to keep the home at the desired comfort level.

Whenever the furnace is in the low stage, energy is saved because the burner flame is smaller and the blower fan runs at a slower speed. Even in the high stage, this model with its AFUE rating of 95% saves on utility bills.

Less on-off cycling reduces wear and tear on components. Also, with the furnace running for longer periods of time, more air is passing through the filter, helping improve indoor air quality at the same time.

The ECM variable speed blower motor adjusts the blower speed to deliver the airflow required by the system. By maintaining constant airflow across a wide range of external

static pressures
in the air ducts,
it results in more
even temperatures
than a single speed
motor can provide.
And because air is
constantly being drawn
across the filter, indoor
air quality and humidity
control are enhanced.
In addition, the blower
is designed to deliver
the conditioned air
quietly.

Igniter Technology

The control board is programmed to learn individual igniter heat-up and then to adjust the heat-up interval to best suit the furnace's characteristics, ensuring reliable ignition while helping to prolong igniter life.

Outstanding Warranty

The primary and secondary heat exchangers on the two stage 95% furnace are covered by a limited lifetime warranty; other components are covered for 12 years.

(Limitations apply; see printed warranty or web site for details.)

Reliability You Can Trust

Heat Controller, Century's parent company, has been in the furnace business since its founding in 1933—in fact, the company can trace its roots to the Wingert Furnace Co. which began building coal, gas and oil furnaces in 1907. Air conditioning equipment was later added to round out the product line.

Known today for efficient, reliable equipment for both heating and cooling, Century® continues to keep homes and businesses comfortable, season after season.

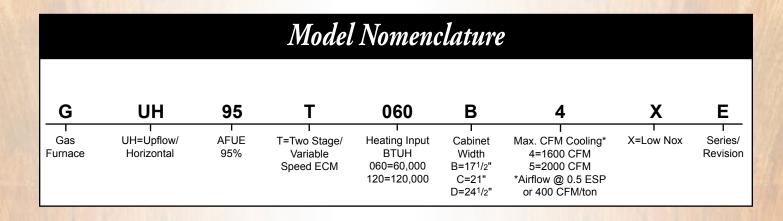

For year-'round comfort, ask your dealer about our line of central air conditioning—the perfect match for energy savings!

NOTES: Furnaces are not listed for use with fuels other than natural or L.P. (propane) gas.

All models can be converted by a qualified distributor or local service dealer to use L.P. (propane) gas. Factory approved kits must be used to convert from natural to L.P. (propane) gas and may be ordered as options.

For L.P. (propane) operation, refer to instructions packed with conversion kit.

All models are approved for vertical non direct (1 pipe) and direct (2 pipe) venting applications. See installation instructions for further details.

Features and Benefits

Save space as well as energy!

At just 34 ½" high, our two stage furnace is a real space miser. While it's great for new construction, this energy efficient series is also ideal for replacements because it can fit in the space of virtually any older furnace. Its light weight and small dimensions make even bigger capacity models easy to unload and move up or down stairs and through doorways during installation. And the low profile design leaves plenty of room for add-ons, including the new higher SEER coils with taller cabinets.

Easily converted to L.P. (propane)

Kits are available to allow a trained installer to convert the furnace to L.P. gas source quickly and easily in the field. All that's needed is a simple burner orifice and regular spring change.

Features and Benefits

- Quiet Operation—Blower compartment has sealed door and insulation to lock in heat and sound; sealed vestibule reduces burner and inducer sound levels; plus two stage inducer and ECM blower motor make this one of the quietest furnaces on the market
- Extraordinary Efficiency—Two heat exchangers deliver 95%+ of the heated air to the home, while the two stage inducer optimizes first stage efficiency
- **ECM Blower Motor**—Runs at a variety of speeds to match the load demand, for efficiency and quiet operation. Constant airflow through a wide variety of ductwork conditions reduces temperature stratification while improving indoor air quality
- Hot Surface Igniter—Silicon nitride type igniter is automatic, eliminating the need for a standing pilot light
- Designed for Long Life—Primary heat exchanger is made of heavy gauge aluminized steel and secondary heat exchanger is made of stainless steel; cabinet is steel with corosion resistant finish
- Thermostat—Can be used with either a single or two-stage thermostat; two stage is recommended for optimal efficiency (not included with furnace)

On-Board Diagnostics—Unlike some units that require counting flashes to determine the problem, the GUH95T has a dedicated light for flame signal strength, and two lights that illuminate in combination for easily recognized fault codes

Our High Efficiency Furnace May Actually Pay For Itself in Energy Savings!

A home is most people's biggest investment and making sure it's comfortable in all seasons is a primary concern. A Century gas furnace helps provide that comfortable environment. There are several types and a wide range of capacities to meet the home's specific requirements and the homeowner's individual preferences. Not only are the furnaces quality designed and constructed, they're energy efficient, helping to save on utility bills.

All Century products are backed by outstanding warranties and after-sales support. Experienced technicians can help solve operation and service issues over the phone. And our web site is another resource with owner's manuals and technical documentation for installers.

The compact size of our furnaces makes them ideal for replacements; builders and architects also appreciate the installation flexibility they offer for new construction. A Century dealer can evaluate the home and determine which furnace (and related equipment such as central air conditioning) is best suited to specific climates and needs.

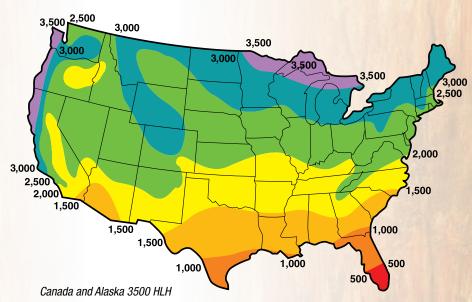

With our broad product range, Century has the model and accessories to suit just about any home's location and heating requirements.

Annual Fuel Utilization Efficiency (A.F.U.E. ratings) is your guide for comparing gas furnace efficiencies. The higher the number, the more efficient the furnace.

Beginning in 1992, the Federal Government required all gas furnaces to meet or exceed an A.F.U.E. (Annual Fuel Utilization Efficiency) rating of 78%. Although this was an improvement over previous furnace ratings of 65% or less, today's furnaces offer even greater efficiencies. Replacing your older gas furnace with a high efficiency 95% two stage model can result in significant energy savings.

And the greater the number of heating load hours for your area (see chart) the greater the energy savings.

Regional Winter Heating Load Hours
