

- Prevents & Removes Existing Limescale
- Environmentally Friendly, No Chemicals or Salts
- No Maintenance - No Salt Bags, No Filters
- No More Clogged Pipes, Boilers and Hot Water Heaters
- Increases Water Pressure
- Protects Washing Machines, Dishwashers, Faucets and Shower Heads
- Protects 24 Hours a Day 7 Days a Week
- Provides Whole House Protection
- Works in All Types of Water Flow and Temperatures
- No Plumbing Required, Easy to Install
- Unique Worldwide Patented Technology

CSA Certified
Intertek Tested

HydroCare Saves over \$1200.00 A Year

Hardwater removal produced an average energy savings of \$983.00 per year.

Limescale buildup drastically reduces the life of boilers, hot water heaters and other water using appliances. Average unnecessary appliance replacement savings of \$273.00 per year.

The World Wide Proven Technology In Hard Water Treatment

HydroCare™

GO WITH THE FLOW!!!

HydroCare™ - NO SALTS, NO CHEMICALS, NO MAGNETIC COILS!

Hard Water Costs You Money!

Limescale build-up contributes to inefficient and costly operation of water-using appliances. When the water is heated, the hard water salts usually deposit as encrusting limescale. The build up on the heat exchangers creates an insulated layer that requires increased energy to heat the water.

Limescale deposits can also contribute to the complete failure of such appliances. Pipes can become clogged with scale that reduces the water flow and ultimately requires pipe replacement.

Before Hydrocare

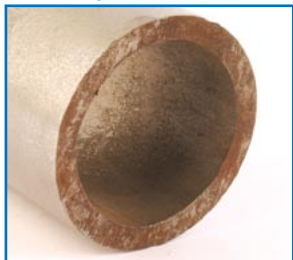

Cutaway of pipe with limescale build-up

Inside of Boiler with limescale build-up

After Hydrocare

HydroCare Technology solves Hard Water Problems

HydroCare breaks up hard water clogs and prevents mineral buildup in your entire water system. You simply clip the compact HydroCare unit to the pipe, and plug into an outlet. HydroCare begins working right away, transmitting a patented signal into your entire water system, preventing minerals from depositing on the inside of your pipes and appliances. Plus, it dissolves existing buildup of limescale, and treats the water throughout your entire house. It's safe, harmless, maintenance-free and performance guaranteed. One unit treats the whole house.

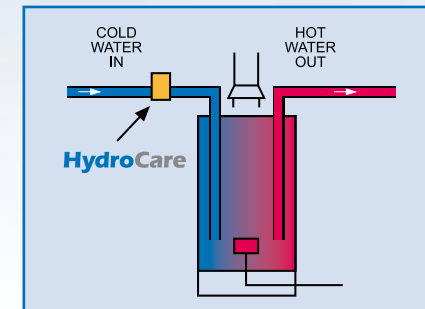

The unit emits a long wave radio signal on a frequency of 120-140kHz.

HydroCare does not change the chemical composition of the water in any way; it works purely on a physical basis. Essential minerals for healthy drinking and good taste are retained in the water.

Very Easy to Install

The HydroCare unit simply clips to a pipe, and is plugged into an outlet. Place the HydroCare unit on the cold feed to the hot water system. The technology ensures that the unique field propagates through the entire system regardless of the type of pipe material.

Direct fired water heating

British Gas Test Results

British Gas tested the unit and reported the following:

“The technology is the only device to approach an ideal for reducing/preventing scale formation on a continuous operational basis at high temperature.

This is an essential and unique feature required by water heating appliances.”
