# NOW COMPATIBLE WITH 1 or 2-STAGE A/C AND HEAT PUMPS\* (DUAL FUEL)!! (\* ONLY COMPATIBLE WITH UNITS THAT ENERGIZE THE REVERSING VALVE IN THE COOLING MODE)

## **VHBXB-HW** Series

**Variable Speed** 

1.5 - 5.0 Tons **Cooling** Up to 132,400 BTUH **Hot Water Heating Without HW Pump** 

Variable Speed ECM Motor

In addition to all the popular features of it's sister product (the HBXB-HW Series), the **VHBXB-HW** series includes a programmable, high efficiency motor that redefines comfort and energy savings. The **VHBXB-HW** motor automatically adjusts its torque and speed to maintain a preprogrammed level of constant airflow over a wide range of external static pressures. This variable speed technology offers better indoor air quality, more precise humidity control, quieter operation, consistent indoor air temperature, and lower utility bills.

**High Efficiency** - At full load conditions the **VHBXB-HW** motor is 20% more efficient than an induction motor and at constant fan speed it consumes only 60-80 watts of power compared to 400 watts for a standard induction motor. In addition, the **VHBXB-HW** includes a high efficiency "A" coil with factory installed TXV for precise refrigerant control.

(1) First Co's customer is ultimately responsible for confirming which fan coil models are compatible with selected outdoor unit(s) and which expansion valves (if any) are required. to determine approved indoor/outdoor matches, go to: www.firstco.com or contact the factory.

**Quiet Operation** - The versatile **VHBXB-HW** motor quietly "ramps up" when the unit is turned on and "ramps down" when the thermostat is satisfied, eliminating the annoying sounds of changing airflow.

**Self-Regulating Constant Airflow** - The **VHBXB-HW** motor is factory programmed to maintain a predetermined level of airflow over a wide range of external static pressures, ensuring optimum system performance and whole-house comfort. The benefits of constant fan operation are:

- Consistent air distribution (and temperature) throughout the home
- Better indoor air quality (further improved with the addition of a high efficiency filter) - This allows the air to be filtered without excessive drafts and without sacrificing efficiency.
- Better humidity control The VHBXB-HW is designed to extract much more moisture from the air than a conventional system by slowing the airflow over the cooling coil. The result is an improved summer comfort level at higher indoor temperature.

### Additional Standard Features:

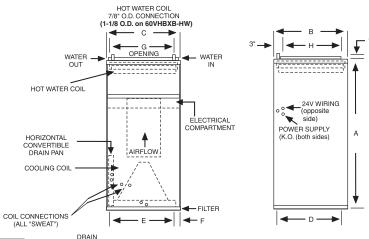

- Factory installed R22 or R410a TXV
- Blower door safety switch (except 48/60VHBXB-HW)
- Convenient connectionsfor boiler or switching relay
- Hot water coil assembly slides out for easier service
- Manual air vent on hot water coil
- Attractive baked-on powder coat finish
- Fully insulated cabinet
- Primary and secondary drain connections on cooling coil
- Optional hot water coil freeze protector Upflow / Horizontal drain pans
- · Higher efficiency pleated filter
- Compatible with most properly sized and installed zone control systems. Contact the zone control manufacturer.

For additional sales and technical information on variable speed motors, visit www.thedealertoolbox.com

Digital thermostats for these units must have a "C" terminal.

## NOTES:

- Heat BTU is at 65° Entering Air Temperature.
- (2) 190° EWT would increase the 180° EWT heating capacities by 9.1%. 200° EWT would increase the 180° EWT heating capacities by 18.2%.

Airflow shown are at standard air conditions, dry coil at 120 volts.

The cooling and heating speed taps are factory set on "A".

The delay profile is factory set on "A" (Arid setting). The adjust profile is factory set on "Normal:"

Adjust profile (+) will increase airflow by 10%, while tap (-) will decrease airflow by 10%

In keeping with its policy of continuous progress and product improvement, First Operations reserves the right to make changes without notice. Maintenance for all First Co. products is available under "Product Maintenance" at www.firstco.com.
