

HYDRONIC HEATING EQUIPMENT

HORIZONTAL AND VERTICAL STEAM/HOT WATER UNIT HEATERS

# **Sterling Hydronic Heating Equipment**

Sterling HVAC Products has had broad experience in the manufacture of steam/hot water unit heaters for many years.

Offered in both horizontal and vertical air delivery models, Sterling unit heaters are a complete heat distributing plant, encased in an attractive, streamlined baked enamel housing. Designed for ceiling mounting, they provide a convenient, low cost method of heating warehouses, stores, factories, and other large open areas.

Sterling, responding to the requirements of the heating industry has now expanded its unit heater line to one of the most complete in the industry, twenty-three horizontal and fifteen vertical steam/hot water models!

Most Sterling unit heaters are equipped with totally enclosed motors with internal thermal overload, statically and dynamically balanced fans for quiet operation, and with the installer in mind, we designed a versatile hanging system for easy installation! Sterling horizontal unit heaters are attractively finished in dark gray jackets with dark gray air deflection louvers.

Sterling is proud of the reputation it has earned in the hydronic heating equipment market for product quality, design, innovations and customer service. The corporation has pledged its full range of engineering and manufacturing resources toward maintaining an unwavering commitment to the steam/hot water heating equipment industry.

# Application of Unit Heaters

The proper choice and placement of a unit heater with regard to building type (architecturally) and application (area use) are two criteria, the importance of which cannot be overemphasized.

The first step in the design of a job is typically to determine the heat loss before considering CFM, final air temperature and quantity and location of units. ASHRAE and others publish the basic methodology used in calculating the building or area's heat loss.

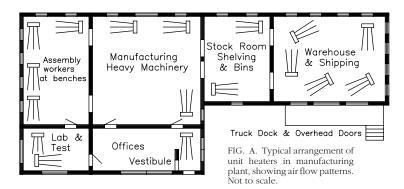

Two requirements which not only affect the heat loss calculation but every other step of the job as well, are a detailed knowledge of the building's construction and its planned usage. The number of people, types of equipment and daily activities therein should be a strong guiding factor in the overall design.

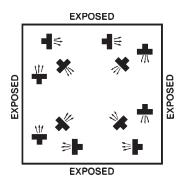

Sterlings's horizontal steam/hot water unit heaters are available in a range of outputs and airflows allowing almost unlimited flexibility in job design.

The following points offer some basic guidelines and suggestions which will be helpful in designing any job using horizontal steam/hot water unit heaters:

 Always direct airflow to areas of greatest heat loss.

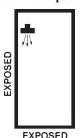

- Adjust throw length with horizontal louvers.
- Use horizontal and vertical louvers for complete directional control of airflow.
- Mount units at the lowest practical and allowable level.
- Select lower CFM models for lower mounting heights and heavily occupied areas.
- The higher a unit must be located, the more CFM is required to get the heat down to the occupied zone.
- More, smaller units will provide better heat distribution than fewer larger ones.
- Watch final air temperatures on units mounted at lower levels or in heavily occupied areas to insure that air is warm enough to avoid drafts being felt.
- On motors with variable speed control use lower CFM rating for design base.
- Watch sound ratings.

A large square area with exposed walls and roof; units are blanketing all exposed surfaces.

A narrow area with four exposed walls either with or without roof exposure.

A small area with exposed walls requiring one unit.

# Horizontal Unit Heaters Construction and Features

## **MOTORS**

115 volt, single speed motors are standard. Most models can be supplied with single phase, explosion proof motors. For standard motors in 230 volt or three-phase configuration, and three-phase explosion-proof motors, see page 16 for availability.

## **FAN GUARDS**

All models with standard (non-explosion-proof) single phase 115 or 230 volt motors utilize a wire fan guard as a motor mount. OSHA type fan guards can be added as an optional accessory. All models with three-phase or explosion-proof motors are shelf-mounted. Standard fan guards can be added as an optional accessory.

#### HORIZONTAL AND VERTICAL LOUVERS

Horizontal louvers are standard on all models. Vertical louvers are an optional accessory on all models. Vertical louvers are installed on built to order units or shipped loose for field installation.

## **THERMOSTATS**

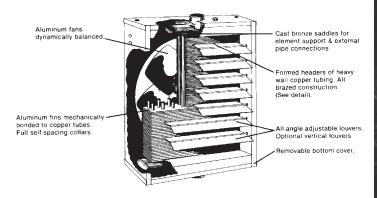

Three, line voltage wall thermostats are in stock for immediate shipment. All models operate in a 45 to 85°F (7 to 28°C) range. Standard duty models with "off-auto" and "auto-off-fan" and a heavy duty model with "auto-off-fan" switching are available. Other models available on request. Plastic tamperproof one size fits all thermostat guards are also available.

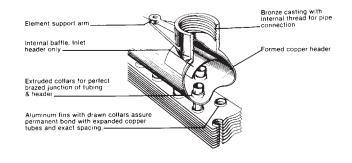

## STRAP-ON WATER CONTROL

A SPDT strap-on type hot water control with 100° to 240°F (38 to 116°C) rated at 10 amps at 120V is also available. Control can be used for direct or reverse acting applications as a high or low limit.

## STEAM PRESSURE CONTROL

SPST switch opens on a rise in pressure. Control is automatically reset, has a range of 0 to 15 PSIG (0 to 103 KPa) and has an adjustable differential. **Other actions, ranges, circuits and manual reset models are available on request.** 

## **MANUAL STARTERS**

Single and three-phase models are available. Standard models are single-speed, toggle-operated, NEMA Type 1 and are surface-mounted.

## WALL MOUNTED SPEED CONTROLLERS

Units up to HS108 and VS104 with standard motors (115V) can be operated at reduced speeds by addition of optional speed controller. Controller is 5 amps, pre-set at factory for maximum and minimum speeds, with intermediate speeds infinitely controllable. All 1/3, 1/2 H.P. and 230V motors operate only at rated speed and CFM – See performance data charts.

<sup>\*</sup> For the lower output, an optional Speed Controller must be ordered.

For Sound Ratings See Pages 8 & 10.

<sup>\*\*</sup> For further information see page 13, COIL MODELS.

<sup>†</sup>Stated AMP is full load (FLA). AMP draw varies by motor manufacturer ± .2 AMPS. See page 16 for motor data.

# **Steam Calculations and Correction Factors**

		EXAMPLE: –  UNIT: HS-24  Steam Pressure 10 PSI Entering Air Temp 40°F
I. CAPACITY A. For 2 lbs. steam, 60° entering air	Read output directly from table on p. 6, 24,000 BTU/HR. (Ref., Std. HS-24).	
B. For higher steam pressures and/or E.A.T.'s above or below 60°F	Multiply output from table on p. 6 by appropriate correction factor from table A (below).	24,000 x 1.29 = 30,960 BTU/HR.
II. FINALAIR TEMPERATURE A. For 2 lbs. steam, 60° entering air	Read temperature directly from table on p. 6, 109°F. (Ref., Std. HS-24).	
B. For capacities calculated in I.B. (above)	$\frac{\text{Output from I.B.}}{1.085 \text{ x CFM from Table p. 6}} + \text{E.A.T.} = \text{Final Air Temp.}$	$\frac{30,960}{1.085 \times 450} + 40 = 103.4^{\circ} \text{F}.$
III. FINALAIR VOLUME A. For 2 lbs. steam, 60° entering air	$\frac{460 + \text{Final Air Temp from table on p. 6}}{530} \times \begin{array}{c} \text{Nom. CFM} & \text{Final} \\ \text{from} & = \text{Air} \\ \text{Table on p. 6} & \text{Volume} \end{array}$	460+109 530 x 450 =483 CFM
B. For final air temperatures calculated In II. B. (above)	Nom. CFM Final  460 + Final Air Temp from II.B.  530  Nom. CFM Final  from = Air  Table on p. 6 Volume	$\frac{460+103.4}{530} \times 450 = 478 \text{ CFM}$
<b>IV. CONDENSATE PER HOUR</b> A. For 2 lbs. steam, 60° entering air	Read lbs. per hour from table on p. 6, 24.5 LBS./HR. (Ref., Std. HS-24).	
B. For capacities calculated in I.B. (above)	Output from I.B. Latent Heat From Table B = lbs. per hour of condensate	$\frac{30,960}{953}$ = 32.5 LBS./HR.

# Horizontal Unit Heaters Technical Data

The performance data listed on page 8 includes sound ratings. The ratings provide a guide in determining the acceptable degree of loudness in particular occupancy situations.

Certain general rules apply to specific selection of unit heaters with regard to degree of quietness (or loudness);

- The greater the fan diameter, the higher the sound level.
- The higher the motor RPM, the higher the sound level. Note that on most units the lower the speed mode results in lowering the sound rating one increment.
- Selecting a larger number of smaller units generally results in lower overall noise levels than fewer large units.

All horizontal steam and hot water unit heater motors, whether fan guard or shelf-mounted, are isolated from the mechanical mount by resilient isolators. This mounting along with balanced fan blades and excellent overall construction integrity, assures you the utmost in quiet operation.

The following table outlines sound ratings for various applications. The lower the number, the quieter the unit and the lower the sound requirement.

CATEGORY OF AREA	SOUND RATING
Apartment, assembly hall, classrooms churches, courtrooms, executive offices, hospitals, libraries, museums, theatres.	I
Dining rooms, general offices, recreation areas, small retail stores.	II
Restaurants, banks, cafeterias, department stores, public buildings, service stations.	III
Gymnasiums, health clubs, laundromats, supermarkets.	IV
Garages, small machine shops, light manufacturing.	V
Factories, foundries, steel mills.	III - VII*

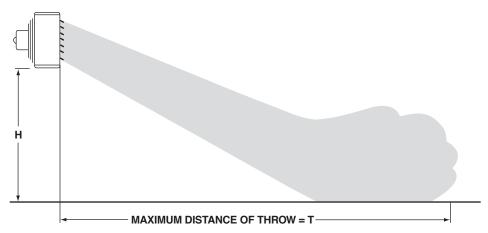

<sup>\*</sup>Depending on specific use in these facilities, size of operation, etc.

# Mounting Heights and Throws

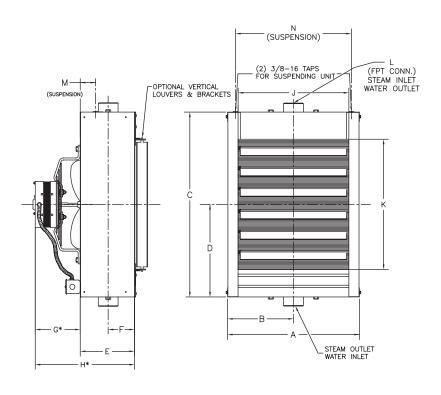

The following table is based on 60° entering air and either 2 lb. steam or 200° water with a 20° T.D. The data is based on the higher speed CFM throughout and velocity. Care should be exercised in locating adjacent unit heaters and allowance should be made for obstructions in the air pattern and conflicting air currents from other air moving devices.

<sup>\*</sup> APPLIES TO STANDARD MOTOR WITH STANDARD FAN GUARD. WHEN OPTIONAL MOTORS OR OSHA FAN GUARDS ARE REQUESTED, DIMENSIONS WILL CHANGE ACCORDING TO THE SUBSTITUTIONS MADE.

NOTES: 1. Standard motor and standard guard shown.

<sup>2.</sup> Optional OSHA guards available for all units with 1 phase motors. 3. All 3 phase and explosion proof motors are shelf mounted.

# Horizontal Specifications

## **GENERAL**

Furnish and install, where indicated or scheduled on plans Sterling Model HS horizontal steam/hot water unit heaters. Unit shall be equipped as specified herein. All units shall be installed in a neat and workmanlike manner in accordance with this specification and the manufacturer's installation instruction.

## **CASING**

Casings shall be 20 gauge die-formed steel. Casing substrates shall be prepared for finishing with a hot wash, iron phosphatizing clear rinse, chromic acid rinse and oven drying. Paint finish shall be of lead-free, chromate free, alkyd melamine resin base and applied with an electrostatic two-pass system. Finish shall be baked at 350°F.

## **COIL MODELS 18 – 360**

Coil elements and headers shall be of heavy wall drawn seamless copper tubing. Element tubes shall be brazed into extruded header junctions. Pipe connection saddles shall be of cast bronze. Aluminum fins shall have drawn collars to assure permanent bond with expanded element tubes and exact spacing. All Element Assemblies are submersion tested at factory at 250 P.S.I., and are rated at 150 pounds of saturated steam pressure at 366°F, under maximum load conditions. We recommend operating pressure of 75 P.S.I. at 320°F for long life.

## MOTORS

Motors shall be totally enclosed, resilient mounted with class "B" windings. All motors shall be designed for horizontal mounting. Motors under 1/3 H.P. are totally enclosed, frame mounted, 115/1/60 with thermal overload protection and permanently lubricated sleeve bearings with optional solid state speed controller available. 1/3 H.P. (115/1/60) motors are open frame construction, with thermal overload protection and ball bearings. 1/3 H.P. at (230V) and 1/2 H.P. (230V) motors are open frame construction, with thermal overload protection and ball bearings. 1/3 and 1/2 H.P. motors are available in single and 3 phase in open frame construction or explosion-proof housings, all the above are available as options.

## **EXPLOSION PROOF MOTORS**

An enclosed motor whose enclosure is designed and constructed to withstand an explosion of a specific gas or vapor which may occur within the motor and to prevent the ignition of this gas or vapor surrounding the machine.

Sterling motors comply with the National Electrical Code classification as follows:

Class I, Group D; all sizes

Class II, Group F; all sizes

Class II, Group G; all sizes

Division I & II Installations

T-code (T3B)

Explosion proof equipment is not generally available for Class I, Groups A and B and it is necessary to isolate motors from the hazardous area. All explosion proof motors are shelf mounted.

#### **FANS**

Fans shall be of the aluminum blade, hub type designed and balanced to assure maximum air delivery, low motor horsepower requirements and quiet operation. Blades are spark proof.

## **FAN GUARDS**

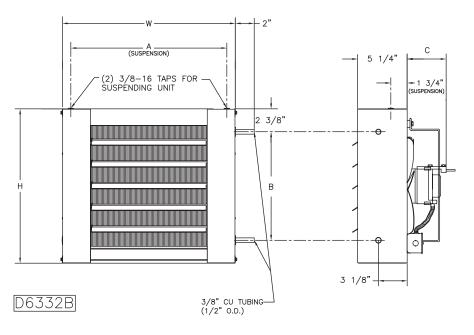

Fan guards shall be welded steel, zinc plated or painted. To meet CSA and OSHA requirements, units mounted below 8 feet from floor must be equipped with an OSHA fan guard. OSHA fan guards are optional.

## AIR DEFLECTION LOUVERS

Units shall be equipped with horizontal, individually adjustable louvers. Vertical louvers for four-way air control shall be available as an optional extra.

# Horizontal Serpentine Coil Unit Heaters Dimensional Data

**NOTE:** Motors are totally enclosed, thermally protected, sleeve bearing, with  $2"(h) \times 4"(w)$  conduit connection boxes. Nutserts are attached to enclosure for balanced hanging.

# Serpentine Coil Specifications

## **GENERAL**

Furnish and install, where indicated or scheduled on plans Sterling Model HS-A horizontal hot water unit heaters. Unit shall be equipped as specified herein. All units shall be installed in a neat and workmanlike manner in accordance with this specification and the manufacturer's installation instruction.

## **CASING**

Casings shall be 20 gauge die-formed steel. Casing substrates shall be prepared for finishing with a hot wash, iron phosphatizing clear rinse, chromic acid rinse and oven drying. Paint finish shall be of lead-free, chromate free, alkyd melamine resin base and applied with an electrostatic two-pass system. Finish shall be baked at 350°F.

## COIL MODELS HS108A - HS136A

Coil is a serpentine design with seamless copper tubing. Aluminum fins shall have drawn collars to assure permanent bond with expanded tubes. Tubing connection shall be  $^{3}/_{8}$ " copper tubing, type "M" (.500 O.D.). Coils shall be factory tested at 250 P.S.I.

#### MOTORS

Motors shall be totally enclosed, resilient mounted with class "B" windings. All motors shall be designed for horizontal mounting.

## **FANS**

Fans shall be of the aluminum blade type, designed and balanced to assure maximum air delivery, low motor horsepower requirements and quiet operation.

## **FAN GUARDS**

Fan guards shall be welded steel, zinc plated or painted. To meet CSA and OSHA requirements, units mounted below 8 feet from floor must be equipped with an OSHA fan guard. OSHA fan guards are also available.

### AIR DEFLECTION LOUVERS

Units shall be equipped with horizontal, individually adjustable louvers.

<sup>\*\*\*</sup>These motors are 115/230 volts.

†230/1/60 unit has 115/1/60 motor supplied with field installed stepdown transformer.

NOTE 3: 1/3 and 1/2 H.P. motors are available as 230V single and 3 phase in open frame and explosion-proof housings, all available as options. 1/3 and 1/2 H.P. motors operate at single speed only.

NOTE 4: Stated AMP draw is Full Load Amp (FLA). AMP draw varies by motor manufacturer  $\pm$  .2 AMPS. Verify FLA per unit motor data plate.

CAUTION: Select appropriate AMP and MCA for the multiple voltage motors. For example, the AMP and MCA for Models 360 with a 460 volt Totally Enclosed motor is 1.3 and 1.6 respectively.

<sup>\*\*</sup>These motors are without thermal overload protection

# Vertical Unit Heaters Features and General Specifications

Sterling vertical projection unit heaters provide heat where it is required in commercial and industrial applications. Mounted near the ceiling, this unit provides air circulation and reduces stratification, without occupying otherwise usable building space. Units can be provided with an optional diffuser for patterned discharge, or, without a diffuser for higher velocity 'spot' heating near doorways and other highloss areas.

Sterling vertical units are available in fifteen sizes for steam or hot water heating. Steam capacities range from 140 to 2,580 E.D.R. (26.0 to 705 MBH) (2 PSI w/60° E.A.T.). Hot water capacities range from 18.9 to 519.4 MBH (200° E.W.T./20° drop w/60° E.A.T.).

## **CONSTRUCTION**

The unit casing is formed by two square steel plates. The bottom plate forms an orifice for air delivery. Air ports are stamped in the top plate of standard units for easy conversion of low output units.

## FAN

Sterling aluminum blade fans are quiet, factory balanced and sturdy for standard or sparkproof applications.

# HEATING ELEMENT

Hot water-steam coils are rectangular 3 or 4-sided, one-pass, multiple circuit, with aluminum fins mechanically bonded to the tubes. Standard coils are seamless copper tubing. Coils tested at 375 psi under water. Supply and return connections are steel pipe. Standard coils have .025 copper tubing suitable for use on steam pressure to 75 psi or hot water up to 225 psi or 325°F.

## MOTORS

Standard motors are 115/60/1, totally enclosed, with thermal overload protection for all units through size VS-280. Standard motors for sizes 40, 62 and 77 are shaded pole, sleeve bearing. The VS-104 motor is permanent split capacitor type with sleeve bearings. Motor for unit sizes 125 through 285 are permanent split capacitor types with permanently lubricated ball bearings. Motors used on unit sizes 317 through 700 are 230/460/60/3, totally enclosed, with permanently lubricated ball bearings. Unit sizes smaller than 317 are also available with 230/460/60/3 motors.

All motors fractional H.P. and integral H.P., have Class "B" insulation. The 115/60/1 motors used as standard on unit sizes 40 through 104 can be operated at multiple speeds with the addition of a solid-state control.

All units are available with 1140 rpm explosion-proof motors.

# Vertical Unit Heaters Steam Performance Data

Performance based on 2# steam pressure at heater with air entering @ 60°F.

#### NOTES

Constant speed units are rated at capacities shown in regular type; capacities shown in italic faced type apply only to units with multi-speed motors.

<sup>\*\*</sup>To determine BTU per hour capacities at various steam pressures and entering air temperatures, use conversion factors from table A, page 20. Final temperatures at new conditions can be calculated by applying basic formula.

# Vertical Unit Heaters Steam Performance Data

Performance based on 2# steam pressure at heater with air entering @ 60°F.

#### NOTES:

Constant speed units are rated at capacities shown in regular type; capacities shown in italic faced type apply only to units with multi-speed motors.

<sup>\*\*</sup>To determine BTU per hour capacities at various steam pressures and entering air temperatures, use conversion factors from table A, page 20. Final temperatures at new conditions can be calculated by applying basic formula.

# Vertical Unit Heaters Steam Calculations and Correction Factors

		EXAMPLE: –  UNIT: VS-40  Steam Pressure 10 PSI Entering Air Temp 40°F
I. CAPACITY A. For 2 lbs. steam, 60° entering air	Read output directly from table on p. 18 & 19: 41,300 BTU/HR.	
B. For higher steam pressures and/or E.A.T.'s above or below 60°F	Multiply output from table on p. 18 & 19 by appropriate correction factor from table A (below).	41,300 x 1.27 = 52,451 BTU/HR
II. FINALAIR TEMPERATURE A. For 2 lbs. steam, 60° entering air	Read temperature directly from table on p. 18 & 19: 124°F.	
B. For capacities calculated in I.B. (above)	Output from I.B. 1.085 x CFM from Table p. 18 + E.A.T. = Final Air Temp.	$\frac{52.451}{1.085 \times 595} + 40 = 121.0$ °F
III. FINALAIR VOLUME A. For 2 lbs. steam, 60° entering air	$\frac{460 + \text{Final Air Temp from table on p. 18}}{530} \times \frac{\text{Nom. CFM}}{\text{from}} = \frac{\text{Air}}{\text{Table on p. 18}} \text{ Volume}$	$\frac{460+124}{530} \times 595 = 655 \text{ CFM}$
B. For final air temperatures calculated In II. B. (above)	$\frac{460 + \text{Final Air Temp from II.B.}}{530} \times \frac{\text{Nom. CFM}}{\text{from}} = \frac{\text{Air}}{\text{Table on p. 18}} \text{Volume}$	$\frac{460+121.0}{530} \times 595 = 652 \text{ CFM}$
IV. CONDENSATE PER HOUR A. For 2 lbs. steam, 60° entering air	Read lbs. per hour from table on p. 18 & 19: 43 LBS./HR.	
B. For capacities calculated in I.B. (above)	Output from I.B. Latent Heat From Table B = lbs. per hour of condensate	$\frac{52,451}{953}$ = 55.0 LBS./HR.

## TABLE B — PROPERTIES OF SATURATED STEAM

STEAM PRESSURE IN LBS. PER SQUARE INCH GAUGE										
	0	2	5	10	15	20	30	40	50	75
Steam										
Temperature-°F	212.0	218.5	227.1	239.4	249.8	258.8	274.0	286.7	297.7	319.9
Latent Heat										
of Steam	970	966	961	953	946	940	929	920	912	891

NOTE 1: Ratings apply only to free inlet and discharge without diffusers.

NOTE 2: All motors are constant speed and operate at top speed as indicated in motor data. Models 40 through 104 can be run at reduced speed with addition of optional variable speed switch. This switch is factory-calibrated for low and high speed ratings, with intermediate speeds infinitely controllable. Models 164 through 700 operate at constant speed as indicated in motor data.

NOTE 3: For specific motor data refer to motor specifications on page  $^{28}$ 

NOTE 4: To correct for entering air temperatures, use 1° temperature rise for each foot in mounting height. As an example, 60° air is required at work area (5 ft. above floor) units are to be mounted at (20 ft.) above floor. Mounting height (20 ft.) minus work height (5 ft.) equals differential (15 ft.) or, 15° rise in air temperature at unit air inlet. Correct for actual inlet air temperature of 75° (60° + 15° = 75° E.A.T.) on table A.

<sup>\*\*</sup>Performance based on 200° EWT, 20° T.D., 60° E.A.T. Performance at 10° & 30° T.D. is also shown. For capacities at other conditions, use the correction multipliers in the tables on page 25.

# Vertical Unit Heaters Hot Water Calculations and Correction Factors

		EXAMPLE: –       VS-40         UNIT:
I. CAPACITY @ 20° TD: A. For 200° EWT, 60° EAT	Read output directly from tables on p. 21 - 24, 22,700 BTU/HR (Ref., Std. VS-40, p. 21).	
B. For EWT and/or EAT above or below Standard	Multiply output from table on p. 21 - 24 by factor from table A (below).	22,700 x .878 = 19,931 BTU/HR.
II. CAPACITY AT OTHER TD's A. For TD's from 5 to 60°F	Multiply output obtained in IA. or IB. (above) by appropriate factor from Table B (below)	IA - 22,700 x 1.15 = 26,105 BTU/HR. - OR - IB - 19,931 x 1.15 = 22,921 BTU/HR.
III. GPMAT OTHER TD's  A. For TD's from 5 to 60°F	Multiply GPM of unit for 20° TD, from table on p. 21 by appropriate factor from table B (below).	2.34 x 2.30 = 5.38 GPM (Applies only to units with Std. 200° EWT, 60° EAT.) For all others calculate using formula – GPM = $\frac{BTU}{500  \text{x TD}}$
IV. PRESSURE LOSS AT OTHER TD'S A.For TD's from 5 to 60°F	Multiply P.D. of unit for 20° TD, from table on p. 21 - 24 by appropriate factor from table B (below).	.06 x 5.00 = .30 Ft. H <sub>2</sub> O

To obtain the BTU capacity for conditions other than those in the basic capacity tables, multiply the basic rating (200° entering water, 60° entering air,) by the proper constant from the above tables.

# TABLE B — HOT WATER BTU, GPM AND PRESSURE LOSS FACTORS BASED ON STANDARD CONDITIONS OF 200°F ENTERING WATER 60°F ENTERING AIR & 20°F WATER DROP

USE FACTORS FROM THIS TABLE TO OBTAIN			. 1	ΓEMPERA	TURE D	ROP °F			
APPROXIMATE RESULTS	5	10	15	20	25	30	40	50	60
To obtain BTU for other Water Temperature Drops, multiply basic BTU rating by applicable Factor.	1.25	1.15	1.08	1.00	.94	.90	.83	.76	.72
To obtain GPM for other Water Temperature Drops, multiply basic GPM rating by applicable Factor.*	5.00	2.30	1.44	1.00	.74	.59	.40	.30	.24
To obtain Pressure Loss Feet of Water for other temperature Drops, multiply Basic loss at 20° drop by Factor.	10.00	5.00	2.00	1.00	.60	.40	.20	.13	.07

#### NOTES:

- \* = Low Speed
- L = Model "VS" low output model with all air ports open

Figures in bold face show maximum mounting height with louver cone diffusers set vertically.

To meet CSA and OSHA requirements, units mounted below 8 feet from floor must be equipped with an OSHA fan guard. Please see page 31 for ordering information.

Above table based on 60°F entering air temperature. In providing for the use of diffusers, it must be remembered that adjustment of a LCD to deflect air toward horizontal immediately lowers the mounting height limit.

## **MAXIMUM SPREAD IN FEET**

Unit Size: VS-	40	62	77	104	125	144	164	200	237	285	317	367	495	585	700
Spread (Ft.)	15	17	20	24	26	27	28	32	35	37	45	50	54	57	60

NOTE: The "spread" is the diameter of the comfort zone at floor level. Projected by the Model "VS" unit without the louver cone diffuser. Based on two pounds steam pressure and  $60^{\circ}F$  entering air.

## **TECHNICAL DATA**

**Propylene Glycol**, when sizing equipment for systems that will utilize a Propylene Glycol solution consider the factors shown on page 10.

495, 585	5.0/2.5***	6.5/3.3	1-1/2	1150					
700	10.0/5.0***	12.5/6.3	3	1150					

<sup>\*\*\*</sup> These motors are 230/460 volts only.

NOTE 1: All motors are constant speed and operate at top speed as indicated in motor data. Models through 1/8 H.P. can be run at reduced speed with addition of optional variable speed switch. This switch is factory-calibrated for low and high speed ratings, with intermediate speeds infinitely controllable. Models 164 through 700 operate at constant speed as indicated in motor data.

NOTE 2: Stated draw is Full Load (FLA). AMP draw varies by motor manufacturer  $\pm$  .2 AMPS.

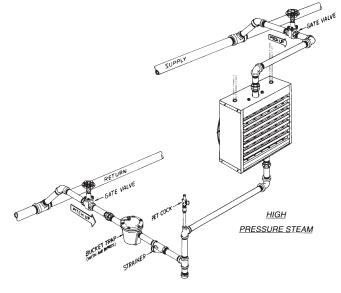

CAUTION: Select appropriate AMP and MCA for the multiple voltage motors. For example, the AMP and MCA for Model 40 with a 230 volt Totally Enclosed motor is 1.1 and 1.4 respectively.

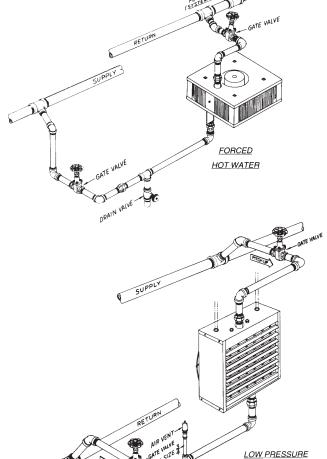

<sup>\*\*</sup> These motors have automatic thermal overload protection or impedance protection.

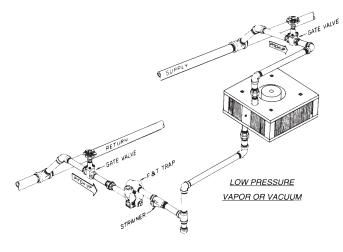

# Horizontal and Vertical Unit Heater Piping and Installation

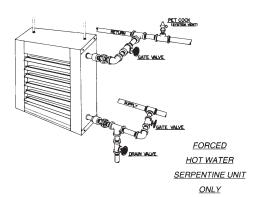

The illustrations below depict different typical piping configurations. Proper selection should be based on the operational characteristics of the source supply. For selection and sizing of piping, traps, filters and other piping specialities, ASHRAE guides and specialty manufacturer's literature should be consulted. We assume that the type and total design of systems has been selected or approved by a qualified engineer. The installation and service manual should be consulted for further information on installation, operation, drainage and system cleaning.

Piping and installation is typical for both horizontal and vertical unit heaters – except side connections (below right).

MANUAL CONTROL WITH SINGLE PHASE MOTOR

THERMOSTATIC CONTROL WITH MANUAL STARTER

THERMOSTATIC CONTROL USING MAGNETIC STARTER OPERATING SEVERAL UNITS SPEED CONTROLLER WITH MANUAL STARTING SWITCH

1. For internal wiring and overload protection on all starters, consult the control manufacturer for details.

2. When using thermostatic control with a manual starter, be sure that the electrical rating of the thermostat is sufficient to carry the motor current.

SPEED CONTROLLERS WITH MAGNETIC STARTING SWITCH FOR OPERATING SEVERAL UNITS MANUAL CONTROL WITH THREE PHASE MOTOR

PHASE UNITS

3. Refer to pages 16 and 28 for motor characteristics of individual unit heaters.

## STEAM/HOT WATER UNIT HEATER WARRANTY

The products in this catalog are warranted by Sterling to be free from defects in material and workmanship for a period of one (1) year from the date of shipment from Sterling's plant. Sterling's liability under this warranty is limited to replacing or repairing at our option, F.O.B. our plant any defective component or assembly returned to our factory prepaid and with proper return authorization documents. All repairs or replacements are made subject to factory inspection. No liability is accepted for consequential damages, freight or labor charges.

This warranty does not cover damages or failure due to improper installation or piping, corrosive atmospheric conditions, misuse or negligence by others.

## **TERMS OF SALE**

- No obligation is assumed by this corporation to sell to anyone holding this book any of the items listed herein.
- An order is not a valid order until acknowledged by Sterling.
- Sterling reserves the right to make changes in design, material or accessory vendors without notice and without obligation to incorporate such changes in products of prior manufacture.
- Additional sales and freight terms are contained in the price list.

# HORIZONTAL HYDRONIC UNIT HEATERS MODEL NUMBER DESCRIPTION
