

Government Green

Facility Name Withheld
Mike Edenstrom
United Mechanical
Dallas, TX

1,000,000 sq. footage
Commercial Kitchen with 2 pot sinks and
Conveyer sprayer dishwasher
131 lavatories

6-GU32 ETERNAL Hybrids
(Replaced two 1,000,000 BTU Boilers
And one 2000 Gallon Storage Tank)

The Facility (its identity undisclosed due to security) features an onsite commercial kitchen with 30 bar sinks, showers, numerous lavatories and even a salon. Two 1 million BTU gas fired boilers along with a 2,000 gallon storage tank had been serving the entire compound for decades. The facility contacted United Mechanical for advice and help. Gary Scoggins, design engineer, and Mike Edenstrom, head installer, chose six ETERNAL Hybrid water heaters for ease of installation with PVC venting and recirculation friendly characteristics. The project was completed just before 2009 rolled around, and the Facility is very happy with the results. Not only did United Mechanical and ETERNAL meet the green challenge, but the hot water service is better than ever.
