## Split System Air Conditioners and Heat Pumps

### Engineered for Quality

- More than just better indoor comfort; we want you to feel comfortable investing in a product that will perform when you need it most. Each Westinghouse air conditioner and heat pump is checked approximately 154 times during the manufacturing process then run-tested to check operation performance. In the final analysis, computer-automated testing is performed to capture operation data for future reference should your contractor ever need it.
- Westinghouse air conditioners and heat pumps are built with proven components to provide safe, clean and reliable comfort year-round. For example, our split system air conditioner and heat pump products feature a reliable Copeland® scroll compressor warranted up to 10 years.

When an air conditioner or heat pump is truly built to exacting standards of quality and durability, the manufacturer's confidence shows in its warranty.

Westinghouse products offer a 10-year warranty on all parts, and a 1-year quality pledge at no

extra cost, when registered. With our 1-year quality pledge, we will replace the entire unit should the compressor fail in the first year when installed with a matched Westinghouse indoor coil or air handler. Extended product protection is available. In addition, your Westinghouse contractor has specific details on warranties, utility rebates and consumer financing programs.

When choosing your air conditioner or heat pump, look not only at the product, but also the service and support provided by your contractor. Westinghouse contractors receive extensive training in the installation and care of your equipment. That means your Westinghouse contractor can help you select the right air conditioner or heat pump for your home and keep it in top operating condition.

So for home comfort year after year, trust the Westinghouse brand.

\* To qualify, air conditioners and heat pumps must have a Seasonal Energy Efficiency Ratio (SEER) rating of 14.5 or higher and Energy Efficiency Ratio (EER) of 12 or higher. Heat pumps are also rated by a Heating Seasonal Performance Factor (HSPF) and qualify with a 8.2 or higher.

## You can be sure... if it's Westinghouse

# 13-16 SEER Split System Air Conditioners and Heat Pumps

## Heat Pump vs. Air Conditioner

Choosing a heat pump as a comfort solution is typically driven by the climate you live in, and is relative to your comfort needs. The heat pump is designed to provide heat in the winter and is best in environments that do not drop below freezing. Your Westinghouse contractor can recommend the right choice for you, a choice that could save you money during the winter months.

A “split” system is the most common heating and cooling central system used. Your split system air conditioner or heat pump is the outdoor component of a total system. The indoor component is a matched coil, which typically sits on top of the furnace, or in warmer climates, an indoor air handler is used. When you replace your outdoor system it is extremely important to replace the indoor portion as well, in order to meet energy efficiency performance and not void important warranties. Not changing your indoor component is like buying a new car then placing old, worn tires on it.

### Features & Benefits

A full metal jacket protects the coil from damage by weather and flying debris. It is finished with a Silicone-protective polyurethane coating that passed a 950 hour salt spray test for harsher climates. It protects your unit from corrosion 50% more than standard outdoor finishes.

Your Westinghouse air conditioner or heat pump has been carefully designed and engineered to give you outstanding energy efficiency and years of trouble-free operation. No detail has been left out. Westinghouse uses only proven components like the Copeland® scroll compressor. It's the leaders choice for efficiency, durability, and longevity. Just another “value added” manufacturing step built into all Westinghouse products. Select up to 16 SEER products feature a two-stage Ultra-tech scroll compressor. Two-stage technology allows your air conditioner or heat pump to operate at the most efficient level for total indoor comfort regardless of the outside temperature.

The one-piece top-design provides maximum air flow and quiet operation to increase your indoor comfort.

This product uses environmentally-friendly refrigerant. R-410A refrigerant is non-ozone depleting.

\* Annual costs based on 36,000 Btu unit, 1500 cooling load hours, and .08/kwh. Actual costs may vary depending on climate conditions, energy rates and patterns of usage.

Proper sizing and installation of equipment is critical to achieve optimal performance. Split system air conditioners and heat pumps must be matched with appropriate coil components to meet ENERGY STAR criteria. Ask your contractor for details or visit [www.energystar.gov](http://www.energystar.gov).
